

Persona Research - Group D

Exploration of Personas and What Type we could use of this project

Be sure to read ElSaid's short paper on canvas about use of Persona in an overall project

Titled: Requirement: Pesona Example

here are 2 short videos (5 mins) that helps explain the basics

https://www.youtube.com/watch?v=9zl5Q1GP_wM

Basically, its to create a fake person who represents a "user" of the product. In most examples i found online, persona's are people who are using the product (like an athlete using a fitness app). However, we are not delivering a product to the general public, our project is focused on cleaning and creating a system that can score app reviews. The persona's we choose will be people who can use that scoring system to improve apps and improve the experience of customers.

With an app review scoring system, different parts of the Major Mobile App Store can focus their work on adjusting the products with weaker scoring. For example, say we have a calorie tracker app that only count overall calories and not macros. A poor user review of the product could say something like "not much variety on how to track calories", so that would result in a low score. one of our "Personas" would want to see this low score so they can know how to fix it based on their job role.

The "users" of our project are the people hoping to gain insights from an accurate scoring of reviews. so in our case, managers, developers, software developers (who can improve the apps based on scores), advertisers, and internal review teams would be the type of 'personas' we are creating. These are just examples and more research can be done to explore types of Stakeholder Persona's.

Below is some basic Research and Exploration of the type of Stakeholders we can use. For the purposes of this project, i dont not think "End-Users" should be a persona we use, but I open to discussion if anyone disagrees.

Major Stakeholders of a mobile App Store (Like Apple or Google Play)

- Developers or Publishers: Create Apps, Rely on the store for distribution, explode, and monetization
- App Store Manager (the App Store Owners/Maintainers): Curates apps, provide store functionality, coordinate installation/updating, and coordinates payment
- End-Users (Comsumers): Download, Rate, and Pay for Applications. The demand Security and Variety

- Platform Owners/Manufactures (Like Google and Apple themselves, who the app store is a subsidiary of): Manage the infrastructure, set policies, manage review processes, and monetize the app store
- Advertisers/Ad-Networks: Utilize the store's ecosystem for mobile marketing and in-app advertising
- Internal Review Team: Responsible for App authentication and enforcing store guidelines

AI Overview when asked "what are some stakeholder personas of a mobile app store"

- "Key stakeholder personas for a mobile app store include **End Users** (seeking discoverability, security, and quality apps), **App Developers** (needing fair distribution, analytics, and revenue tools), and **Store Platform Managers** (focused on compliance, ecosystem health, and monetization). Other crucial personas include **advertisers**, **regulatory bodies**, and **internal app review teams**."

- **End Users (Consumers):**

- **"The Casual Browser"**: Seeks simple, high-rated apps; relies on curated lists and top charts to discover apps.
- **"The Tech Enthusiast"**: Looks for advanced functionality, follows developers closely, and reads reviews before downloading.
- **"The Security-Conscious User"**: Prioritizes app permissions and safety; relies on the platform's malware scanning.

- **App Developers (Suppliers):**

- **"The Indie Developer"**: Focuses on low cost of entry, easy submission processes, and high discoverability to compete with larger players.
- **"The Enterprise Developer"**: Prioritizes advanced analytics, marketing tools, and enterprise-level support for high-volume apps.
- **"The Game Studio"**: Focused on in-app purchase (IAP) optimization, live services, and developer tools for engagement.

- **Platform/Store Managers (Operators):**

- **"App Reviewer/Moderator"**: Ensures apps adhere to safety, privacy, and content guidelines to protect the ecosystem.
- **"App Store Marketing Manager"**: Curates app promotions, banner placements, and "App of the Day" features to drive revenue and engagement.
- **"Product Manager - Monetization"**: Manages commission structures (e.g., 15% vs. 30%) and IAP tools to maximize profitability.

- **External Stakeholders:**

- **"Regulatory Compliance Officer"**: Focuses on GDPR compliance, antitrust regulations, and data privacy policies.
- **"Advertiser/Ad Network Provider"**: Looks for high engagement metrics and effective in-app advertising opportunities. [R⁺ ResearchGate +4](#)
